

Department of Civil Engineering
(Detailed Autonomous Syllabus)

Course Name: DESIGN OF STEEL STRUCTURES

Course Code: CE-601

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (Professional Core Courses)

1. Course Prerequisite:

Class-XII level knowledge of Mathematics and Geometry; Strength of Materials; Solid Mechanics; Structural Analysis; Design of RC Structure

2. Course Learning Objectives:

- Students will be able to learn the fundamental concepts, design philosophies (Limit State Design, Working Stress Design), and codal provisions related to the design of steel structures as per relevant standards.
- Students will be able to develop the ability to analyze and design structural elements such as beams, columns, tension members, connections, and frames, ensuring stability, strength, and serviceability under different loading conditions.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies and Field Visits.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks

4. Course Content:

Course Name: Design of Steel Structures

Course Code: CE-601

Hours per Week: 2L:1T:0P

Credits: 3

Module	Topics	28L+14T
1.	Materials and Specification: Rolled steel sections, mechanical properties of steel and their specifications for structural use. Codes of practices. Design of Steel structures using tubular, rectangular and square section.	2L+1T
2.	Structural connections: Riveted, welded and bolted including High strength friction grip bolted joints. – types of riveted & bolted joints, assumptions, failure of joints, efficiency of joints, design of bolted, riveted & welded joints for axial load. Eccentric connection: - Riveted & bolted joints subjected to torsion & shear, tension & shear, design of riveted, bolted & welded connection.	4L+2T

3.	Design of Tension members: Design of tension members, I.S code provisions. Permissible stresses, Design rules, Examples.	6L+3T
4.	Design of Compression members: Effective lengths about major & minor principal axes, I.S code provisions. Permissible stresses, Design rules, Design of one component, two components and built-up compression members under axial load. Examples. Built up columns under eccentric loading: Design of lacing and batten plates, Different types of Column Bases- Slab Base, Gusseted Base, Connection details.	6L+3T
5.	Design of Beams: Permissible stresses in bending, compression and tension. Design of rolled steel sections, plated beams. simple Beam end connections, beam -Column connections. I.S code provisions.	4L+2T
6.	Design of Girders: Design of Plate girders, Design of webs & flanges, Concepts of curtailment of flanges – Riveted & welded web stiffeners, web flange splices - Riveted, welded& bolted. Design gantry girder considering lateral buckling – I.S code provisions.	6L+3T

6. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Identify the material properties of structural steel.	Identify	Remember
CO2	Describe different bolted and welded connections, analyze and design them for axial and eccentric loads.	Describe	Understand
CO3	Compare different steel sections subjected to axial tension following Indian codes of practices.	Compare	Analyze
CO4	Sketch rolled and built-up compression members along with base connection subjected to axial compression, bending and tension.	Sketch	Apply
CO5	Sketch Beams and various connections related to beam.	Sketch	Apply
CO6	Assess different components of girder system, calculate lateral and vertical loads acting on the system	Assess	Evaluate

7. Mapping of course outcomes to module / course content

Module	CO1	CO2	CO3	CO4	CO5	CO6
1	3	-	-	-	-	-
2	-	3	-	-	-	-
3	-	-	3	-	-	-
4	-	-	-	3	-	-
5	-	-	-	-	3	-
6	-	-	-	-	-	3

8. Mapping of the Course outcomes to Program Outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO1	2	2	1	1	1	1	0	0	0	1	2
CO2	3	3	3	2	1	2	0	0	0	2	2
CO3	3	3	3	3	1	1	0	1	1	1	3

CO4	3	3	2
CO5	3	3	2
CO6	3	3	2

Course Name: HYDROLOGY & WATER RESOURCES ENGINEERING

Course Code: CE-602

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (Professional Core Courses)

1. Course Prerequisite:

Fluid Mechanics and Hydraulic Engineering.

2. Course Learning Objectives:

- Students will understand precipitation, evapotranspiration, infiltration, runoff, and streamflow measurement in hydrology.
- They will apply hydrological methods for flood estimation, groundwater flow, and flood routing.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks

4. Course Content:

Course Name: Hydrology & Water Resources Engineering

Course Code: CE-602

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L	Syllabus coverage (%)
1.	Introduction Precipitation: Definition of hydrology; Importance of hydrology; Global water availability; India's water availability; Practical applications of hydrology; Hydrologic cycle; Concept of catchment; Water budget equation; Definition of precipitation; Forms and types of precipitation; Measurement of rain fall; Optimum number of rain gauge stations; Consistency of rainfall data; Computation of mean rainfall; Estimation of missing rainfall data; Presentation of precipitation data (moving average curve, mass curve, rainfall hyetographs, intensity – duration - frequency curves); Probability Analysis of Rainfall Data.	9L	21
2.	Losses from Precipitation: Introduction; Evaporation: Definition, Process, factors affecting, measurement using IS Class A Pan; Estimation using empirical formulae; Evapotranspiration (ET); Infiltration: Definition, factors affecting infiltration capacity, measurement (double ring infiltrometer). Horton's infiltration equation, infiltration indices.	7L	17
3.	Runoff Hydrographs: Runoff: Definition; Components. Factors affecting. Rainfall - runoff relationship using simple regression analysis; Hydrographs: Definition; Components of Hydrograph; Unit hydrograph and its derivation from simple storm hydrographs; Base flow separation. S - curve and its uses.	7L	17
4.	Stream Flow Measurement: Introduction; Measurement of stage; Measurement of discharge by Area-Velocity Method, Moving Boat Method, Dilution Technique, Electromagnetic Method, Ultrasonic Method; Indirect Methods: Flow Measuring Structures, Slope Area Method; Simple stage discharge relation.	6L	14
5.	Ground Water Hydrology and Well Hydraulics: Scope and importance of ground water hydrology; Aquifer Parameters: Specific Yield, Specific Retention, Storage Coefficient, Transmissivity; Steady radial flow into wells in unconfined and confined aquifers; Types of wells, Methods of construction.	6L	14
6.	Floods: Concept of flood as a natural hazard; Estimation of flood discharge in a river – rational method, empirical formulae, unit hydrograph method; flood frequency studies – return period; Flood Control Measures.	2L	5

7.	Flood Routing: Concept of flood routing in channels and through a reservoir, Hydrologic vs Hydraulic Routing: Differences, Applications, and Methods; Basic routing equations; reservoir routing – Modified Pul's method; channel routing – Muskingum method.	5L	12
----	---	----	----

9. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Describe hydrology, precipitation, rainfall measurement, and probability analysis of rainfall data.	Describe	Understand
CO2	Explain losses from precipitation, including evaporation, evapotranspiration, and infiltration.	Explain	Understand
CO3	Differentiate runoff components, rainfall-runoff relationships, and hydrograph types.	Differentiate	Analyse
CO4	Use various streamflow measurement techniques, including velocity-area and indirect methods.	Use	Apply
CO5	Judge groundwater hydrology parameters, well hydraulics, and types of wells.	Judge	Evaluate
CO6	Appraise flood estimation, flood control, and flood routing methods.	Appraise	Evaluate

10. Mapping of course outcomes to module / course content

Course Name: CONSTRUCTION ENGINEERING & MANAGEMENT

Course Code: CE-603

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (Professional Core Courses)

1. Course Prerequisite:

- Civil Engineering Materials

2. Course Learning Objectives:

- Understand the principles and processes involved in construction engineering and project management.
- Learn about different types of construction methods, equipment, and materials.
- Develop skills in planning, scheduling, and controlling construction projects.
- Analyze the cost estimation, budgeting, and financial management aspects of construction projects.
- Explore safety, quality control, and risk management in construction projects.
- Gain insights into modern construction management techniques, including Building Information Modeling (BIM).

3. Teaching methodology and evaluation system for the course:

Teaching methodology –Lectures and Presentations, Interactive Discussions and Case Studies, Problem-solving sessions and tutorials, Use of software for project Management, Guest Lectures, and Group Projects.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks

4. Course Content:

Course Name: Construction Engineering & Management

Course Code: CE-603

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	Lecture (42L)
1.	Introduction to Construction Management: Objectives of construction projects, methods of project management, phases of a construction project, role of a construction engineer and manager, building bye-laws and regulatory framework.	6L
2.	Construction Methods and Equipment Selection of construction methods, earthmoving, excavation and tunnelling techniques, earthwork equipment, hoisting equipment,	7L

Module	Topics	Lecture (42L)
	automation in construction practices.	
3.	Project Planning and Scheduling Work breakdown structure and network fundamentals, program evaluation and review technique (PERT), critical path method (CPM), project crashing techniques, updating of schedules and resource allocation.	8L
4.	Cost Estimation and Financial Management Types of cost estimates, rate analysis and quantity surveying, budgeting techniques, financial planning and cost control in construction projects.	6L
5.	Quality, Safety and Risk Management: Construction quality standards and specifications, inspection and testing methods, safety management and accident prevention, identification and assessment of risks, risk mitigation strategies, contractual and legal risk management.	7L
6.	Modern Trends and Project Management Tools: Building Information Modeling (BIM), lean construction and sustainability practices, application of AI, IoT and automation in construction management, case studies of successful and failed projects, use of project management software tools such as Primavera and MS Project, practical applications of project management principles.	8L

6. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Explain the fundamentals of construction engineering and project management.	Explain	Understand
CO2	Identify various construction methods, equipment and its purpose.	Identify	Understand
CO3	Develop project planning and scheduling using software tools like MS Project and Primavera.	Develop	Create
CO4	Execute cost estimation and financial management for construction projects.	Execute	Apply
CO5	Examine construction quality, safety, and risk management strategies.	Examine	Analyze
CO6	Appraise modern trends and emerging technologies like BIM in construction management.	Appraise	Evaluate

7. Mapping of course outcomes to module / course content

Course Name: INTRODUCTION TO FINITE ELEMENT ANALYSIS

Course Code: CE-604

(Semester VI)

Category: Minor

Course Broad Category: CORE ENGG (Program Elective Courses)

1. Course Prerequisite:

Solid Mechanics, Structural Analysis – I, Structural Analysis –II, Problem Solving Using Python and MATLAB

2. Course Learning Objectives:

This is an introductory course in the finite element method. The course learning objectives are:

- (a) To provide the fundamental concepts of the theory of the finite element method
- (b) To expose aspects of the application of the method to realistic civil engineering problems
- (c) Introduce to general purpose finite element software codes and software

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies, Guest Lectures and Field Visits.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks.

4. Course Content:

Course Name: Introduction to Finite Element Analysis

Course Code: CE-604

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L	100 %
1.	Introduction To FEM: Introduction - Limitations of methods of structural analysis - Mathematical modelling of physical Problem - Concept of FEM through perimeter of circle – History, merit and demerits and applications of FEM – FEM based software – Steps involved in FEM as applicable to Structural mechanics problems.	4L	10
2.	Choice Of Displacement Models: Introduction – Discretization - Choice of Elements shapes - Choice of displacement model - Requirements Ideal displacement model - Factors affecting nature and degree of polynomial for displacement models. FORMULATION OF SHAPE FUNCTION AND STRAIN DISPLACEMENT MATRIX: Introduction – Properties of Shape Functions - Methods of Determination – Shape functions for 1D bar and beam element, 2D CST element.	8L	20
3.	Element Stiffness Matrix And Assembly: Introduction - Element Stiffness Matrix based on minimization of total potential Energy and Principle of virtual work, Strong and weak forms, Essential vs. natural boundary conditions Stiffness Matrix for 2 noded truss element, 2 noded Beam element, 3 noded CST - Assemblage of Element Stiffness Matrices and load matrix- Static Condensation	8L	20
4.	1D Bar And Truss Using FEM: Introduction - Analysis of stepped bars and tapered bars- Analysis of plane Truss - Truss with initial Strain/Rise in Temperature	4L	10
5.	Beams And Plates Using FEM: Introduction - Analysis of simply supported beam – Analysis of propped cantilevers, fixed beams, and continuous beams for various loadings, Generalization to two dimensions - Membrane, plane strain and plane stress problems Triangular and quadrilateral elements - Isoparametric elements - Axisymmetric problems, Introduction to analysis of plates for in-plane loading.	8L	20
6.	Introduction to General purpose finite element codes and software: Codes for beams and truss through MATLAB and Python, Familiarization with software e.g. ANSYS, ABACUS, Free Open Source FEM software	8L	20

8. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Explain the basics of FEM	Explain	Understand

CO2	Explain the shape functions and strain displacement matrix	Explain	Understand
CO3	Prepare element stiffness matrix and assemble them.	Prepare	Apply
CO4	Solve problems of bars and trusses using FEM	Solve	Apply
CO5	Solve problems of beams and plates using FEM	Solve	Apply
CO6	Examine different problems using FEM codes and software	Examine	Analyse

9. Mapping of course outcomes to module / course content

Module	CO1	CO2	CO3	CO4	CO5	CO6

Course Name: EATHQUAKE ENGINEERING

Course Code: CE-605

(Semester VI)

Category: Minor

Course Broad Category: CORE ENGG (Program Elective Courses)

1. Course Prerequisite:

Structural Analysis – I, Structural Analysis –II, Design of Reinforced Concrete Structures, Design of Steel Structure

2. Course Learning Objectives:

This is an introductory course in the domain of earthquake engineering. The course learning objectives are:

- (a) To impart the knowledge of behavior of civil engineering structures during earthquakes.
- (b) To explain seismic analysis of framed and masonry structures.
- (c) To introduce the concepts of ductile detailing.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies, Guest Lectures and Field Visits.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks.

4. Course Content:

Course Name: Earthquake Engineering

Course Code: CE-605

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L
1.	Introduction to seismology Fundamentals of earthquake engineering, plate tectonics, Causes of earthquakes, types of earthquakes, important earthquake parameters such as magnitude and intensity, Philosophy of earthquake resistant design	4L
2.	Concept of single degree of freedom Systems Concept of natural frequency and degree of freedom, Equation of motion for single degree of freedom (SDOF) system, Concepts of response of SDOF systems (free, forced, undamped and damped), concept of resonance.	8L
3.	Response of multi degree of freedom Systems Concept of response spectrum, Equations of motion for multi degree of freedom (MDOF) systems, Natural frequencies and mode shape for MDOF systems, Normalization of modes, Dynamic analysis and calculation of base shear of MDOF systems by response spectrum method as per IS 1893, Modal combinations.	8L
4.	Seismic analysis of buildings Concepts of floor diaphragms and lateral load resisting systems, Importance of strength, stiffness, ductility and configuration, various structural irregularities, calculation of centre of mass, centre of stiffness and eccentricity, lateral- torsional analysis of building as per seismic coefficient Method, Calculation for base shear and its distribution along height.	8L
5.	Ductile Design and detailing Importance of ductile detailing, capacity design concept, strong column weak beam theory, Concepts of ductile detailing and design of beams and columns as per IS: 13920.	6L

6.	Seismic analysis & design of masonry buildings Seismic detailing of masonry buildings as per IS: 4326, Provision of various types of bands and vertical reinforcements, Calculation for rigidity of masonry wall, Concept of lateral load analysis of masonry building. Structural controls, Introduction to base isolation and dampers, Introduction to reinforced masonry structures.	8L
----	--	----

8. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Comprehend the Basics of Seismology and Earthquake Engineering	Comprehend	Understand
CO2	Illustrate the Single Degree of Freedom (SDOF) Systems	Illustrate	Analyze
CO3	Assess the Behavior of Multi-Degree of Freedom (MDOF) Systems	Assess	Evaluate
CO4	Perform Seismic Analysis of Buildings	Perform	Apply
CO5	Design Earthquake-Resistant Structures with Ductile Detailing:	Design	Create
CO6	Design Seismic-Resilient Masonry Buildings	Design	Create

Course Name: SOIL DYNAMICS AND MACHINE FOUNDATION

Course Code: CE-606

(Semester VI)

Category: Minor

Course Broad Category: Program Elective Courses

1. Course Prerequisite:

Geotechnical Engineering, Foundation Engineering, Earthquake Engineering.

2. Course Learning Objectives:

- This course introduces the behavior of soils under cyclic and dynamic loading, specifically focusing on the determination of dynamic shear modulus, damping characteristics, and the assessment of liquefaction potential using field and laboratory data.
- Students will also learn to design block foundations for reciprocating and impact machinery, ensuring compliance with Indian Standard (IS) codes for permissible vibration amplitudes and frequency limits.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies, Guest Lectures and Field Visits.

Evaluation System –

Attendance

Internal Assessment (40 Marks)- Formative Continuous Assessment [Continuous Assessment 1(CIA1- 25 Marks written class test, 15 Marks Attendance/Assignment); [Continuous Assessment 2(CIA2- 25 Marks written class test, 15 Marks Attendance/Assignment).

End-Semester Exam (60 Marks)- Summative Assessment.

4. Course Content:

Course Name: Soil Dynamics and Machine Foundation.

Course Code: CE-606

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L
1.	Introduction to Soil Dynamics: Nature of dynamic loads; Vibrations of elementary systems (Free and Forced vibrations); Undamped and Damped single degree of freedom (SDOF)	4L

Module	Topics	42L
	systems; Resonance and its significance; Vibration measuring instruments (Seismographs and Accelerometers).	
2.	Dynamic Soil Properties: Stress-strain behaviour of cyclically loaded soils; Dynamic shear modulus and Damping ratio; Factors affecting dynamic properties. Correlation between $G_{\max}$ and SPT/CPT values.	8L
3.	Liquefaction of Soils Phenomenon of liquefaction; Peak and residual strength; Pore pressure development under cyclic loading; Evaluation of liquefaction potential (Seed and Idriss method); Factors affecting liquefaction; Mitigation measures and ground improvement techniques	6L
4.	Machine Foundations - General Requirements Types of machines and their vibrations (Reciprocating, Impact, and Rotary); General criteria for design of machine foundations; Permissible amplitudes and frequencies; Indian Standard (IS) code provisions for machine foundation design.	9L
5.	Analysis and Design of Block Foundations Barken's method of analysis; Linear elastic weightless spring method; Determination of coefficient of elastic uniform compression (C_u); Design of foundations for reciprocating machines; Design of foundations for impact machines (Hammers).	9L
6.	Vibration Isolation and Control Theory of vibration isolation; Active and Passive isolation; Methods of isolation (Trench isolation, use of springs and rubber pads); Case studies on vibration-induced damage and remedial measures	6L

5. References:

Text Book:

6. Course Outcomes:

After completion of this course, students will be able to

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Interpret the behavior of Single Degree of Freedom (SDOF) systems under free and forced vibrations to determine critical parameters like resonance and damping.	Apply	Apply
CO2	Estimate dynamic soil properties, such as shear modulus and damping ratio, using laboratory results and correlations with field tests like SPT and CPT.	Estimate	Evaluate
CO3	Assess the liquefaction potential of saturated cohesionless soils using the Seed and Idriss method and propose appropriate ground improvement techniques	Assess	Evaluate
CO4	Implement Indian Standard (IS) code provisions and design criteria to satisfy permissible amplitude and frequency	Implement	Apply

	requirements for various machine types.		
CO5	Design block foundations for reciprocating and impact machines using Barken's method and linear elastic weightless spring theory.	Design	Analyse
CO6	Develop vibration isolation strategies, choosing between active and passive methods, to protect sensitive structures and mitigate dynamic interference.	Develop	Create

Course Name: Industrial Waste Water Management

Course Code: CE-614

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (Program Elective Course-4 PE)

1. Course Prerequisite(s):

Students are expected to know the fundamentals of Mathematics, Chemistry, Environmental Engineering, Fluid Mechanics, and Biology for Engineers.

2. Course Learning Objectives:

The objectives of the course are to enable the student

- Differentiate between the quality standards for domestic and industrial water needs, as well as the quantity of wastewater generated.
- Comprehend industrial processes, water consumption patterns, and wastewater production.
- Develop an understanding of appropriate treatment methods for industrial wastewater.
- Learn about the operational challenges associated with common effluent treatment plants.
- Acquire knowledge of various techniques and strategies to minimize wastewater generation, along with the application of physico-chemical and biological treatment methods for the recovery, reuse, and disposal of industrial wastewater.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies and Field Visits.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks

4. Course Content :

Course Name: Industrial Waste Water Management

Course Code: CE-614

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L	Syllabus coverage (%)
1.	Introduction General Characteristics of Industrial effluents, Effects on Environment – ISI tolerance limits for discharging industrial effluents into surface water, into public sewers and on to land for irrigation.	4L	10
2.	Sources of Pollution Physical, Chemical, Organic & Biological properties of Industrial Wastes, Difference between industrial & municipal waste waters, Effects of industrial effluents on sewers and Natural water Bodies.	6L	14
3.	Pre & Primary Treatment Equalization, Proportioning, Neutralization, Oil separation by Floating-Waste Reduction-Volume Reduction-Strength Reduction.	8L	19
4.	Waste Treatment Methods Nitrification and De-nitrification, Phosphorous removal, Heavy metal removal, Membrane Separation Process, Air Stripping and Absorption Processes, Special Treatment Methods, Disposal of Treated Waste Water.	8L	19
5.	Industrial Effluents: Composition, Sources, and Treatment Characteristics and Composition of waste water and Manufacturing Processes of Industries like Sugar, Characteristics and Composition of Industries like Food processing Industries, Steel, and Petroleum Refineries.	10L	24
6.	Wastewater Management in Textile, Tannery, and Mineral Processing Industries	6L	14

	Characteristics and Composition of Industries like Textiles, Tanneries, Atomic Energy Plants and other Mineral Processing Industries, Joint Treatment of Raw Industries waste water and Domestic Sewage, Common Effluent Treatment Plants(CETP), Location, Design, Operation and Maintenance Problems – Economical aspects.

6. Course Outcomes (CO):

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Examine the characteristics of industrial effluents and their effects on environment including their tolerance limits.	Examine	Analyse
CO2	Describe the basic principles of industrial waste water treatment by physical methods.	Describe	Understand
CO3	Discuss the sources, characteristics and treatment of industrial wastes.	Discuss	Understand
CO4	Identify the sources, characteristics and treatment of major industrial waste of Thermal Power Plants, Oil Refineries, Steel mills and Cement industries.	Identify	Understand
CO5	Examine the sources, characteristics and treatment of Chemical industrial wastes.	Examine	Analyse
CO6	Appraise the economic aspects of joint treatment of industrial and domestic wastewater.	Appraise	Evaluate

7. Mapping of Course Outcomes (CO) to Module:

Module	CO1	CO2	CO3	CO4	CO5	CO6

Course Name: CONSTRUCTION EQUIPMENTS AND AUTOMATION

Course Code: CE-615

(Semester VI)

Category: MAJOR

Course Broad Category: ELECTIVE (PE)

1. Course Prerequisite:

Concrete Technology Sustainable and Green Construction.

Course Learning Objectives:

- Identify various types of construction equipment and recognize emerging trends and innovations in automation within the industry.
- Select and analyze appropriate construction equipment, including drones, based on site conditions, project requirements, capabilities, and limitations.

2. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies, Guest Lectures.

Evaluation System –

Total Marks: 100 [40(CIA) + 60% of (ESE)]

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks

3. Course Content:

Course Name: CONSTRUCTION EQUIPMENTS AND AUTOMATION

Course Code: CE-615

Hours per Week: 3L-0T-0P

Credits: 3

Module	Topics	42L
1.	Introduction: Distinctive features, necessity, and significance of construction equipment in projects; emerging trends and innovations in construction technology.	4L
2.	Construction Equipment: Excavating equipment, pavers, rollers, plastering machines, cranes and hoists, concrete batching plants, hauling and conveying equipment; analysis of capacity, feasibility, safety, and owning and operating costs of various construction equipment.	7L
3.	Emerging trends in construction automation: necessity, challenges, and benefits; automated equipment and machinery for construction; automation in canal lining, highway construction, and concrete technology.	8L
4.	Drones in construction: Photogrammetry, real-time project monitoring, aerial mapping, land surveying, quantity and quality assessment, structural health monitoring, and underwater surveying.	7L
5.	Robotics: Introduction to robotics in construction; benefits in terms of time, cost, quality, and safety; applications in bricklaying, demolition, material handling, structural steel cutting, rebar tying and bending, formwork production, and 3D printing of building and infrastructure components.	9L
6.	Application of advanced technologies in construction automation: Building Information Modeling (BIM), Virtual Reality (VR), Augmented Reality.	7 L

6. References:

7. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Basic understanding of construction equipment's in construction projects	Recognize	Understand
CO2	Derive feasibility of specific equipment in different project conditions.	Relate	Understand
CO3	Selection of Automation techniques in construction industry and applicability in engineering solutions.	Execute	Apply
CO4	Select suitable drone technology for surveying, project management and structural health monitoring.	Calculate	Analyze
CO5	Analyze benefits of robotics versus conventional construction equipment.	Relate	Analyze

CO6	Classify application of Virtual Reality, Augmented Reality, BIM in construction industry.	Formulate	Create
-----	---	-----------	--------

Course Name: STRUCTURAL HEALTH MONITORING AND REHABILITATION

Course Code: CE-616

(Semester VI)

Category: Major

Course Broad Category: PROGRAM ELECTIVE COURSE

1. Course Prerequisite:

Class-XII knowledge of Physics and mathematics; Undergraduate level knowledge of Structural Engineering.

2. Course Learning Objectives:

- This course will enable students to assess the health of structures using different techniques of SHM and identify suitable SHM techniques for the in-service performance of structures.
- Students will also learn to decide the appropriate strengthening & retrofitting techniques to regain structural strength.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures and Presentations, Interactive Discussions and Case Studies, Guest Lectures and Field Visits.

Evaluation System –

CIA1: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

CIA2: 40 MARKS (25 marks written class test, 15 marks Attendance/assignment)

Final exam: 60 marks.

4. Course Content:

Course Name: Intelligent Transportation Systems

Course Code: CE-616

Hours per Week: 3L:0T:0P

Credits: 3

Module	Topics	42L
1.	Need of Structural Health Monitoring, Definition & Concept of SHM, SHM & Biomimetic Comparison of SHM with NDT, Factors affecting the health of structures, SHM scheme, various steps in SHM, damage diagnostic methods, challenges in SHM.	6L
2.	Methodologies and Monitoring Principles, Local & Global Techniques for SHM, Static & Dynamic Field Testing, Short & Long-Term Monitoring, Active & Passive Monitoring. , Concrete strength assessment –Rebound hammer test – Ultrasonic pulse velocity tests, penetration resistance, pullout tests, core sampling and testing, chemical tests – carbonation, chloride, content and corrosion problem.	8L
3.	Instruments for SHM, Data Acquisition Systems-Types, Hardware & It's Components. Basics of Sensors, Transducers & Actuators, Classification of Sensors, and Characteristics & Working Principles of Various Types of Sensors	6L
4.	Vibration Control & SHM Damage Diagnostic methods based on vibration response, Ambient Vibration Test, Method based on modal frequency/shape/damping, Curvature and flexibility method, Modal strain energy method, Sensitivity method, Baseline-free method, Experimental modal analysis, operational modal analysis and combined methods.	8L
5.	Numerical Methods & Demonstration of Dynamic Properties of Structures for Damage Detection & SHM, Acoustic Emission Technique, Electromechanical Impedance Technique, Wave Propagation Based Techniques, Fibre Optics Based Techniques, Remote & Wireless SHM Techniques, IoT Application in SHM, Artificial Intelligence & Machine Learning in SHM.	8L
6.	Introduction to deterioration of structures, Case studies of structural damages & failures, Need of Retrofitting, Current scenario of infrastructure through case studies. <i>Concept of Repair & Retrofitting of Structures:</i> Case studies of structural & foundation failure, performance problems, causes of distress in structural members, design and material deficiencies, and factors causing extensive Deterioration in buildings and bridges <i>Structural Assessment:</i> Conditional Evaluation, Damage Assessment Procedure, Principles of Structural Assessment, Classification & levels of assessment.	6L

8. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	To Discuss the fundamentals of structural dynamic	Discuss	Understand
CO2	To Explain the needs and challenges of Structural Health Monitoring (SHM).	Explain	Understand
CO3	To Examine various methods of damage detection.	Examine	Analyze
CO4	To Solve the conditional assessment & techniques for strengthening and retrofitting of structures	Solve	Apply
CO5	To Use the Structural Health Monitoring technique for building.	Use	Apply
CO6	To Use the Structural Health Monitoring techniques for bridge	Use	Apply

9. Mapping of course outcomes to module/course content

Course Name: BIOLOGY FOR ENGINEERS

Course Code: CE-681

(Semester- 6th)

Course Broad Category: CORE ENGG (Program Elective Course)

Course Prerequisite:

- Class-X-XII level knowledge of Biology and Bio-Environmental Science.
- Undergraduate level introductory knowledge of Bio- Engineering.

1. Course Learning Objectives:

- This course imparts basic knowledge of biology, evolution, general awareness of environmental pollution effects and bio-engineering's aspects that provides the basic ideas among the engineering students for a better foundation of technical education.
- To provide fundamentals among the upcoming young engineers and to carry out advanced technical and machinery research projects in biology and allied domains.

2. Teaching methodology and evaluation system for the course:

Teaching methodology – Lectures , Practical's and Presentations, Interactive Discussions and Case Studies and d Field Visits.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Hands-on Laboratory Sessions, Pre-lab Theoretical Lectures and Discussions, Problem-solving Sessions, and Lab Reports and Data Interpretation.

Evaluation System –

Total Marks: 100 [60(PCIA) + 40(PESE)]

Passing criteria: 50% and above

PCIA (60 marks): Continuous Assessment, Attendance, Viva.

Practical End Semester Examination (40 Marks): Written test.

4. Course Content:

Course Name: Biology for Engineers

Course Code: CE-681

Hours per Week: 0L:0T:2P

Credits:1

Module	Topics	14 P
1	INTRODUCTION OF SOIL Study of some physicals and chemicals criteria of the soil. Physical properties – temperature, humidity.	1P
2	Chemical properties – electric method, measuring pH, colorimetric method	1P
3	SOIL MICROORGANISMS Isolations and enumerations of soil microorganisms.	1P
4	FRUITING GLIDING BACTERIA FROM SOIL Isolation of Fruiting Gliding Bacteria	1P

5	MICROORGANISMS DECOMPOSES CRUDE OIL Microbial decomposition (bacterial effects) of crude oil	1P
6	Microbial decomposition (fungal effects) of crude oil	1P
7	Microbial decomposition (algal effects) of crude oil	1P
8	Environmental Management Principles: Perspectives, concerns and management strategies; Policies and legal aspects.	1P
9	Environment Protection Acts and modification, International Treaties; Environmental Impact Assessment-Case studies (International Airport, thermal power plant)	1P
10	Biostatistics Introduction to Biostatistics:-Terms used, types of data ;Measures of Central Tendencies-Mean, Median, Mode, Normal and Skewed distributions; Analysis of Data-Hypothesis testing and ANNOVA(single factor)	1P
11	Ecology Ecosystems-Components, types, flow of matter and energy in an ecosystem; Community ecology-	1P
12	Characteristics, frequency, life forms, and biological spectrum Ecosystem structure-Biotic and a- biotic factors, food chain, food web, ecological pyramids;	1P
13	BOD OF WATER / WASTE WATER SAMPLE Determination of BOD[Biological Oxygen Demand] of water or waste water sample.	1P
14	Isolation of microorganism from waste water sample.	1P

6. Reference Books:

1. Biology: A global approach: Campbell, N.A. ;Reece, J.B.; Urry, Lisa; Cain, M,L.; Wasserman, S. A.; Minorsky, P. V.; Jackson, R.B. Pearson Education Ltd

3. Principles of Biochemistry (V Edition), By Nelson, D. L.; and Cox, M. M.W.H. Freeman and Company.
4. Molecular Genetics (Second edition), Stent, G. S.; and Calender , R. W.H. Freeman and company, Distributed by Satish Kumar Jain for CBS Publisher
5. Microbiology, Prescott, L.MJ.P. Harley and C.A.Klein 1995 .2nd edition Wm, C.Brown Publishers LifeSciences ,Vol.I &II,PathfinderPublications.

5. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Define the physical properties and chemical properties individually of soil.	Define	Remember
CO2	Discuss the laws to control the environmental pollution and ecology of the bio-environments.	Discuss	Understand
CO3	Examine the microbial enzymatic decomposes ability.	Examine	Analyse
CO4	Explain about the Biostatistics Calculations	Explain	Understand
CO5	Justify BOD calculation from water sample from different areas.	Justify	Evaluate
CO6	Investigate the microorganisms of waste water sample.	Investigate	Create

Course Name: CAREER PLANNING AND SKILL DEVELOPMENT
Course Code: CE-682
(Semester VI)
Category: Knowledge Enhancement
Course Broad Category: Multidisciplinary Non-Credit Course- 4 (MNC)

1. Course Prerequisite:

- Basic communication skills (verbal and written)
- Awareness of career opportunities in civil engineering and allied fields
- Willingness to develop soft skills, technical skills, and employability skills.

2. Course Learning Objectives:

- a. Understand career opportunities in civil engineering and interdisciplinary domains.
- b. Develop effective communication, leadership, and teamwork skills.
- c. Enhance technical proficiency and digital literacy for career growth.
- d. Learn resume writing, interview preparation, and job application strategies.
- e. Explore entrepreneurship, higher studies, and research opportunities.
- f. Build networking skills and industry connections for career advancement.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Hands-on Laboratory Sessions, Pre-lab Theoretical Lectures and Discussions, Problem-solving Sessions, and Lab Reports and Data Interpretation.

Evaluation System –

Total Marks: 100 [60(PCIA) + 40(PESE)]

Passing criteria: 50% and above

PCIA (60 marks): Continuous Assessment, Attendance, Viva.

Practical End Semester Examination (40 Marks): Written test.

4. Course Content:

Course Name: Career Planning And Skill Development

Course Code: CE-682

Hours per Week: 3L:0T:0P

Credits: 0

Module	Topics	Lecture (42L)
1.	Career Exploration and Goal Setting 1.1 Introduction to career planning 1.2 Career opportunities in civil engineering, public sector, private sector, and research 1.3 Role of interdisciplinary skills in career growth 1.4 Setting SMART career goals	6L
2.	Communication and Presentation Skills 2.1 Verbal and non-verbal communication 2.2 Public speaking and presentation skills 2.3 Writing emails, reports, and professional correspondence 2.4 Effective storytelling and elevator pitch	6L
3.	Resume Building and Personal Branding 3.1 Resume formats and content optimization 3.2 Cover letter writing and job application techniques 3.3 LinkedIn profile creation and networking strategies 3.4 Personal branding and online presence management	5L

4.	Interview Skills and Group Discussions 4.1 Types of interviews (technical, HR, behavioral) 4.2 Common interview questions and answers 4.3 Case study-based group discussions 4.4 Mock interviews and feedback sessions	5L
5.	Technical Skill Development 5.1 Digital tools and software proficiency (MS Excel, AutoCAD, STAAD Pro/SAP200, Primavera, BIM etc.) 5.2 Importance of data analytics and AI in civil engineering 5.3 Certifications and online learning platforms (Coursera, edX, Udemy etc.)	5L
6.	Entrepreneurship, Higher Studies, and Research Opportunities 6.1 Pathways for entrepreneurship and startup ecosystem 6.2 Higher education and scholarship opportunities in India and abroad 6.3 Research methodologies and technical paper writing 6.4 Funding agencies and grants for research and innovation	5L
7.	Leadership, Teamwork, and Workplace Ethics 7.1 Leadership styles and decision-making skills 7.2 Importance of teamwork and conflict resolution 7.3 Time management and productivity hacks 7.4 Professional ethics and workplace culture	5L
8.	Industry Exposure and Networking 8.1 Industry trends and future skill requirements 8.2 Alumni interaction and mentoring sessions 8.3 Site visits and hands-on workshops 8.4 Career planning roadmap and final reflections	5L

10. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Identify various career opportunities in civil engineering and interdisciplinary domains.	Identify	Understand
CO2	Develop effective communication and presentation skills for professional growth.	Develop	Create
CO3	Design a strong resume, cover letter, and online professional presence.	Design	Create
CO4	Demonstrate interview skills, group discussion techniques, and networking abilities.	Demonstrate	Apply
CO5	Demonstrate technical proficiency in relevant digital tools and software.	Demonstrate	Apply

CO6	Explain leadership, teamwork, ethics, and entrepreneurship for career success.	Explain	Understand
-----	--	---------	------------

Course Name: BUILDING INFORMATION MODELING

Course Code: CE-691

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (PC)

1. Course Prerequisite:

Undergraduate level knowledge of Building Planning and Computer-Aided Civil Engineering Drawing, Construction Engineering & Management, Design of RC Structures & Design of Steel Structures, and basic knowledge of isometric structures and engineering graphics fundamentals.

2. Course Learning Objectives:

- To understand the Fundamentals of BIM and Software Applications.
- To develop Architectural and Structural Models Using BIM Tools.
- To integrate MEP (Mechanical, Electrical, and Plumbing) Components into BIM Models.
- To perform quantity estimation and generate construction documentation.

- v. To visualize the designs in real time within the 3D modeling environment.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Hands-on Laboratory Sessions, Pre-lab Theoretical Lectures and Discussions, Problem-solving Sessions, and Lab Reports and Data Interpretation.

Evaluation System –

Total Marks: 100 [60(PCIA) + 40(PESE)]

Passing criteria: 50% and above

PCIA (60 marks): Continuous Assessment, Attendance, Viva.

Practical End Semester Examination (40 Marks): Written test.

4. Course Content:

Course Name: Building Information Modeling

Course Code: CE-691

Hours per Week: 0L:0T:2P

Credits: 1

Module/ Experiments	Topics	14P	100%
1.	Introduction to BIM and Revit Software Setup: Overview of BIM and Revit: Evolution, Features, Model Visualization, and System Requirements	1	07
2.	Fundamentals of Revit and 3D Model Creation: Basic Concepts in Revit, Exploring Architectural, Structural, and Components Tabs, Importing CAD Files, Creating a 3D Model	2	14
3.	Architectural Modeling and Level of Development (LoD) Implementation: Level of Development (LoD) and its Types, Developing Architectural Models from Lower LoD to Higher LoD	3	21
4.	Structural Modeling and Reinforcement Detailing in BIM: Creating Structural Models (RCC & Steel), Preparation of Bar Bending Schedule (BBS)	3	21
5.	MEP (Mechanical, Electrical, and Plumbing) Modeling and Integration in BIM: Creating Plumbing Models and Integrating Them into Architectural Models	2	14
6.	Quantity Estimation, Costing, and GFC Documentation in BIM	2	14
7.	Interference/Clash Check Using Revit and Navisworks, BIM Coordination, and Digital Twin Applications	1	09

8. References:

- BIM Handbook by Chuck Eastman ET. AL., WILEY Publisher.
- An introduction to Building Information Modeling (BIM) by “The Institution of Structural Engineers BIM Panel”.
- Building Information Modeling by Construction Manager’s Library - ERASMUS.

9. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Describe BIM fundamentals, evolution, and Revit software features.	Describe	Understand
CO2	Sketch 3D architectural and structural models with LoD concepts.	Sketch	Apply

CO3	Demonstrate RCC and steel models with reinforcement detailing and BBS.	Demonstrate	Apply
CO4	Integrate MEP systems into BIM for coordinated design.	Integrate	Analyze
CO5	Appraise quantity estimation, costing, and Good for-construction (GFC) drawings for project execution.	Appraise	Evaluate
CO6	Perform clash detection using Revit/Navisworks and explore Digital Twin.	Perform	Evaluate

10. Mapping of course outcomes to module / course content

CO5	1	1	2
CO6	1	2	3

Course Name: HYDROLOGY & WATER RESOURCES ENGINEERING LABORATORY

Course Code: CE-692

(Semester VI)

Category: Major

Course Broad Category: CORE ENGG (PC)

1. Course Prerequisite:

Fluid Mechanics and Hydraulic Engineering, Hydrology and Water Resources Engineering.

2. Course Learning Objectives:

- i. This course familiarizes the students with the operational principles and field applications of various meteorological and hydrological instruments, including rain gauges, double-ring infiltrometers, evaporimeters, and sunshine recorders.
 - ii. Students will also learn to calculate and evaluate the spatial distribution of rainfall over a basin using standard engineering techniques over a delineated catchment area.
3. Teaching methodology and evaluation system for the course:
 Teaching methodology – Hands-on Laboratory Sessions, Pre-lab Theoretical Lectures and Discussions, Problem-solving Sessions, and Lab Reports and Data Interpretation.
 Evaluation System –
 Total Marks: 100 [60(PCIA) + 40(PESE)]
 Passing criteria: 50% and above
 PCIA (60 marks): Continuous Assessment, Attendance, Viva.
 Practical End Semester Examination (40 Marks): Written test.
4. Course Content:
 Course Name: Hydrology & Water Resources Engineering Laboratory
 Course Code: CE-692
 Hours per Week: 0L:0T:2P
 Credits: 1

Experiment	Topics	28P
1	Catchment Area delineation (Manually and using DEM).	10P
2	Calculation of average rainfall over a catchment area with the arithmetic mean method, Thiessen Polygon Method, and Isohyetal Method.	10P
3	Use of different types of Rain gauges.	2P
4	Use of the infiltration rate using the Double Ring Infiltrometer.	2P
5	Measurement of evaporation using an evaporimeter.	2P
6	Measurement of bright sunshine hours using a sunshine recorder.	2P

5. References:

- a. Chow, V. T. (1964). Handbook of Applied Hydrology. McGraw-Hill.
- b. Gupta, H. V., Sorooshian, S., & Yapo, P. O. (1999). Hydrologic Modeling. American Geophysical Union.
- c. Linsley, R. K., Franzini, J. B., Freyberg, D. L., & Tchobanoglous, G. (1992). Water Resources Engineering. McGraw-Hill.

6. Course Outcomes:

After completion of this course, students will be able to

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Develop a diagram of the catchment area for any water body from the given information.	Develop	Create
CO2	Calculate the average rainfall over a catchment.	Calculate	Analyse
CO3	Measure the rainfall data using different types of rain gauges.	Measure	Evaluate
CO4	Measure the rate of infiltration of water through the soil.	Measure	Evaluate
CO5	Measure the evaporation using an evaporimeter.	Measure	Evaluate
CO6	Measure the sunshine hours on a particular day.	Measure	Evaluate

Course Name: Computational Tools and Software Laboratory in Civil Engineering

Course Code: CE-693

(Semester 6th)

Category: Major

Course Broad Category: Program Elective Course- 3 (PE)

1. Course Prerequisite:

Concrete Technology, Geotechnical Engineering, Foundation Engineering, Design of RC Structure, Structural Analysis, Design of Hydraulic Structure, Building Planning, and Computer-Aided Civil Engineering Drawing.

2. Course Learning Objectives:

- iii. This course introduces the concept of design and analysis of different kinds of civil engineering structures and phenomena through different computer-based software packages.
- iv. Students will also increase their proficiency in the software-based analysis of civil engineering problems.

3. Teaching methodology and evaluation system for the course:

Teaching methodology –

Provide a theoretical knowledge and familiarize with different tools and menus.

Hands-on practice in the lab on various structures.

Real-life model preparation and design of small structural projects, integration with other projects.

Evaluation System –

Total Marks: 100 [60(PCIA) + 40(PESE)]

Passing criteria: 50% and above

PCIA (60 marks): Continuous Assessment, Attendance, Viva.

Practical End Semester Examination (40 Marks): Written test.

4. Course Content:

Course Name: Computational Tools and Software Laboratory in Civil Engineering.

Course Code: CE-693

Hours per Week: 0L:0T:2P

Credits: 1

Module	Topics	28P
1.	Introduction to Computational Tools and Software: overview of computational tools in civil engineering, types of software used in different areas of civil engineering (structural, geotechnical, hydraulic, transportation, environmental, etc.), Software installation, configuration, and interface overview.	3P
2.	Structural Analysis using STAADPro: Basic structural model creation, Structural analysis, interpretation of results, and design of simple structures; Wind analysis, Seismic analysis, different load combinations as per Indian Standards, and complete design of multistoried buildings by using STAAD.Pro	5P
3.	Structural Analysis using ETABS: Multistoried building model creation, analysis, and design of steel and concrete structures.	5P
4.	Critical model creation in SAP2000: Wind analysis, Seismic analysis, different load combinations as per Indian Standards, and complete design of RCC tanks by using SAP2000.	5P
5.	Slope stability and Foundation settlement analysis using PLAXIS: Geotechnical analysis of different slopes; Settlement analysis of shallow foundation using Plaxis3D and Plaxis2D.	5P
6.	Hydraulic and Hydrological analysis using HEC-RAS software: Hydrological design, model, & analyse water networks using HEC-RAS.	5P

5. Course Outcomes:

After completion of this course, students will be able to

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Identify the Engineering Software and its configuration.	Identify	Understand
CO2	Design Civil Engineering Structures via STAAD.Pro.	Design	Analyse
CO3	Model Steel and Concrete Systems in ETABS.	Model	Evaluate
CO4	Assess Specialized Infrastructures in SAP2000.	Assess	Evaluate
CO5	Estimate the Geotechnical Stability of Slopes and Settlement of Shallow Foundations in PLAXIS.	Estimate	Evaluate
CO6	Simulate the Hydraulic and Hydrologic Network Model HEC-RAS.	Simulate	Evaluate

6. Mapping of course outcomes to module/course content

CO6	3	1	2

Course Name: Advanced Technologies and Monitoring Systems Laboratory

Course Code: CE-694

(Semester VI)

Category: Major

Course Broad Category: PROGRAM ELECTIVE COURSE- 4 (PE)

1. Course Prerequisite:

Fundamentals of Structural and Geotechnical Engineering, Proficiency in statistical analysis, MATLAB, or Python, Basic understanding of Non-Destructive Testing (NDT) Techniques, Basic understanding of Material Testing and Pavement Analysis.

2. Course Learning Objectives:

- To develop proficiency in non-destructive testing (NDT) methods.
- To apply advanced monitoring techniques for structural and geotechnical evaluation.
- To integrate smart technologies for real-time infrastructure monitoring.
- To analyze pavement and bituminous material performance.
- To evaluate material behavior under accelerated conditions.

3. Teaching methodology and evaluation system for the course:

Teaching methodology – Hands-on Laboratory Sessions, Pre-lab Theoretical Lectures and Discussions, Problem-solving Sessions, and Lab Reports and Data Interpretation.

Evaluation System –

Total Marks: 100 [60(PCIA) + 40(PESE)]

Passing criteria: 50% and above

PCIA (60 marks): Continuous Assessment, Attendance, Viva.

Practical End Semester Examination (40 Marks): Written test.

4. Course Content:

Course Name: Advanced Technologies and Monitoring Systems Laboratory

Course Code: CE-694

Hours per Week: 0L:0T:2P

Credits: 1

Experiment	Topics	14P	100%
1.	Non-Destructive Testing (NDT) of Concrete: Rebound Hammer Test for Surface Hardness	1P	07
2.	Ultrasonic Pulse Velocity (UPV) Test for Concrete Quality and Homogeneity Assessment	1P	07
3.	Combined Rebound Hammer and UPV Testing for Structural Integrity Evaluation of Buildings	1P	07
4.	Accelerated Curing Tank: Evaluating Early Strength Gain in Concrete Specimens	1P	07
5.	Ultrasonic Pulse Velocity (UPV) Test on Concrete under Accelerated Curing Conditions	1P	07
6.	Dynamic Cone Penetration Test (DCPT) for Soil Layer Strength and Stiffness Evaluation	1P	07
7.	Soil Moisture and Pressure Sensor Interface with Raspberry Pi for Geotechnical Stability Analysis	1P	07
8.	Calibration and Testing of Strain Gauges and Accelerometers for Structural Monitoring	1P	07
9.	Real-Time Data Logging and Analysis Using DAQ Systems	1P	07
10.	Aerial surveying in civil engineering using IZI Fly Drone	1P	07
11.	Modified Roughness Evaluation Using MERLIN for Pavement Surface Profiling	1P	07
12.	Indirect Tensile Strength Test of Bituminous Mix for Tensile and Cracking Resistance Analysis	1P	07
13.	Real-Time Pavement Health Monitoring: Integration of Temperature and Strain Sensors with Raspberry Pi	1P	07
14.	Centrifuge Extractor Test: Separation of Liquid and Solid Particles in Bituminous Materials	1P	09

15. References: NA

16. Course Outcomes:

Course Outcomes	Details/Statement	Action Verb	Knowledge Level
CO1	Implement NDT techniques (Rebound Hammer, UPV) for concrete quality assessment.	Implement	Apply
CO2	Examine soil properties using DCPT and sensor-based geotechnical monitoring.	Examine	Analyze
CO3	Demonstrate real-time data acquisition using DAQ systems and sensors.	Demonstrate	Apply
CO4	Appraise pavement roughness, bituminous mix performance, and tensile strength.	Appraise	Evaluate

CO5	Formulate aerial surveying techniques using drones and smart monitoring technologies to enhance civil infrastructure assessment and analysis.	Formulate	Create
CO6	Develop skills in calibration, data interpretation, and decision-making for civil engineering applications.	Develop	Create

17. Mapping of course outcomes to module / course content
